

6516207359.txt

Being a resident of an Atlanta suburb, I look forward to the anticipated availability of local traffic and weather from XM Radio. The ability to press a button on my dash and immediately obtain traffic information during rush hour is the primary reason for obtaining service. The local radio stations do not offer this level of service, so I urge you to reject the NAB's petition 04-160. In addition, I remind you that satellite television providers offer local content. I am also concerned that the ramifications of the petition would ultimately lead to censorship of some of adult oriented programming available on XM Radio. This would be similar to censoring my premium channels that I pay extra for on my cable television bill.

Please consider my request to reject petition 04-160. I pay for the satellite radio service because I can't get the same service from anywhere else.

Thank you,

Chris white
